III. 1 What did you like about the class?

Exposure to different features
Hands on experience
How easy it was to follow
Meh
Learning how to do things I did not know.
I liked how in-depth the professor understand the program and how he is willing to help everyone whenever they have a question. He makes the class interesting and creates a great class dynamic.
Graphics
The material was made accessible with the structured workbook and the teacher's preparedness helped take some of the tension out of being in a new environment and using a different computer. The teacher was very patient with the varying degree of student experience.

III. 2 What didn't you like about the class?

We got behind and were rushed at the end.
Moved slowly
Waiting on other people to finish got a little boring
Not super engaging
Too fast paced for me
n/a
The length of the class made it difficult for me to absorb the material. I saturated after a while. There are so many tabs and functions that I started getting confused.

III. 3 What improvements would you suggest?

better pace to finish
When teaching, create own examples and talk through them rather than using the same activities and examples as the book.
More geared toward actual applications of the program
Longer class
I would suggest going over the material we are going to cover and then when the students are working on it, you (prof Burnett) should go through the book examples, too. I think it would help the people in the class that have questions. Maybe try it out in level III next week! :)

III. 4 What other classes would you like to see offered?

CAD floorplan drawings
N/A
nope

IV. 1 How did you find out about this class?
