III. 1   What did you like about the class?

Examples and specifics
Instruction is clear and concise
The instructor took time to explain his lessons
Prof was very nice o go over each questions asked. He provided hands on training.
The professor was gave me a solid introduction to HTML.
Mr. Burnett was very helpful to our exercises for us to learn with hands on exercises.
The material and course content was very good.

III. 2   What didn't you like about the class?

we did not get thru 3 of the chapters
The individual attention the instructor provided to everyone

Hands on training
Occasionally the servers for Montgomery College would act up.
Class meet six time. This does not provide enough time to cover all important topics.
It is not the instructors fault, but there are too many people in the class without enough experience which slows the class down tremendously. The instructor had to continuously go over the work for about 3 students many times, and ended up having to show these 3 students what to type "keystroke" by 'keystroke"... this part of the class was very frustrating and disappointing. This is a shame because the instructor is very knowledgeable, and his material is very good.

III. 3 What improvements would you suggest?

Need to slow down pace and need a bit more days to train. Not 6 sessions.
I would increase the total length of the course. We need more time to get an even better understanding of HTML.
Increase 2 or more sessions to cover additional topics.
Allow the instructor to decide when a student is too far behind, and stop baby sitting that student so the other students can get the complete instruction that was paid for.

III. 4 What other classes would you like to see offered?

More time, but not too much more
Java Script and J-Query
javascript/ cyber security
Classes that go more into depth on the topic of HTML
This class sessions were not enough: we did not get to 3 chapters/lessons. So maybe this class needs to be offered in two classes.

III. 5 What is (are) your reason(s) for taking this class?

professional development
To get general knowledge about website building and how to use html codes.
To get a better understanding of HTML and CSS and get a job that pays for those skill-sets
To obtain general knowledge of web page development and be able to update and maintain an existing webpage.
I am a software developer that takes courses like this as 'refresher'. They courses are great for getting students started, and not overwhelming.

IV. 1 How did you find out about this class?
