III. 1   What did you like about the class?

Prof. Burnett was patient with the varying levels of the class. He offered a LOT of materials on his website that were so useful and will be useful to me in the future when I'm on my own.
We experienced the satisfaction of building a complete web site. Very knowledgeable instructor.
I liked how Professor Burnett began with slides to explain the coursework then had us jump into student exercises. It also helped that he would make sure everyone had completed everything correctly before moving on too quickly to the next step.
That we can review course material on ProfBurnett.com website.
Class exercises
I like the hands-on experience.
The organization was very well done.
Covering the book syllabus and doing book excersise
Very interactive and hands on
Hands on experience.
Gave a good foundational understanding of the HTML concepts that i was looking for.
The class really started at the beginning of Web Design, in terms of HTML code and CSS capabilities.
Instructor always made sure that all students were up to speed on each step before proceeding to additional steps
It's interesting to learn what goes on behind what is seen on the screen. Thank you for being patient.

III. 2   What didn't you like about the class?

The varying levels of the students. Some probably should have taken a pre course. We didn't get to a section which was disappointing.

While following the instructor in class, he switches to the web page, before we finish coding.

nothing.

Enjoy learning new things.

Definitely fast-paced course... would be nice if there was a little more time in between classes so that students can go over material prior to the next session.

It seemed like the class was kind of rushed. One or two more session with 2 hour instead of three hours times.

it was fast

nothing

The pace of the course moves very quickly.

The course builds a website from scratch and while many of the attributes are "prescribed" in the exercises, there isnt much time to go into depth on the options that are available for each attribute and tag.

The pace was fast, but it is good to dive in and try and get over the learning curve quickly.

I have nothing

That I felt very far behind. I could follow the concepts, but not necessarily navigate my way around the screen. Don't think I could write the code myself at this point - and wonder if the rest of the class can. I'd like to be more familiar with the syntax.

III. 3   What improvements would you suggest?

N/A

none. It was great.

None

see response from item #2

The Professor was very prepared and very professional, patient, and helpful. I would suggest extending the class length in order for the classes not to feel so rushed.

It can be more clear and medium fast

maybe more time as in more days for the course

I would like the class time to be longer and for the class to have more than 5 sessions.

There is sufficient content to have this course span 7 or 8 sessions and go into further depth on design, frameworks and example sites.

Perhaps providing the code for the day in the beginning of class, but that comes with issues.

N/A

For me, there is a bit of a learning curve. I thin k more exposure and the ability to practice would help.

III. 4   What other classes would you like to see offered?

More sessions of HTML5: 2 and HTML5: 3!

I think the courses offered are excellent selections.

Cyber Security, video game design, animation.

Animation, web designing, back end programming

Ruby.

Whatever is relevant to the marketplace.

IV. 1   How did you find out about this class?
